Interpreting a Data Table

Read the evidence

Name: _____ Group: _____ Date: _____

Workshop visit preferences

Fifty students chose one workshop to visit. These are classroom practice data, not a real college survey.

Workshop	Number of students
Automotive	20
Electronics	15
Interior Design	10
Marine	5
Total	50

A. Find the facts

1. Which workshop has the highest number? _____
2. Which has the lowest number? _____
3. How many students are represented altogether? _____

B. Compare the figures

1. Automotive has _____ more students than Electronics.
2. Interior Design has _____ as many students as Marine.
3. Electronics has _____ times as many students as Marine.

C. Check the claim

Is each statement supported by the table? Explain briefly.

1. Marine is the most popular workshop.

Check another claim

2. Students chose Automotive because it is easy.

Interpreting a Data Table

Turn figures into a paragraph

Name: _____ Group: _____ Date: _____

D. Plan two useful comparisons

Categories / figures	Comparison phrase

E. Write 60-80 words

Introduce the table, give an overall pattern, and include at least two accurate comparisons. Do not invent reasons for the preferences.

Useful language: The table shows ... / The highest number ... / whereas ... / compared with ... / twice as many ...

F. Independent check

Write one new comparison that you did not use in your paragraph.

Check your work

- ☐ My introduction identifies the table.
- ☐ My figures and comparisons are accurate.
- ☐ My overview describes the main pattern.
- ☐ I separated evidence from guesses.
